

Practical Hearing Aid Selection and Fitting

Henry Tobin, PhD

**Department of Veterans Affairs
Veterans Health Administration
Rehabilitation Research and Development Service
Scientific and Technical Publications Section**

ACKNOWLEDGMENT

We gratefully acknowledge the assistance of **Christine Helliesen**, formerly a technical editor with The Department of Veterans Affairs, Rehabilitation Research and Development Service, in the initial preparation for this issue. Ms. Helliesen is currently a program analyst in the Department of Veterans Affairs, Office of Medical Research and Development (12G), Washington, DC.

Throughout the monograph, illustrations of hearing aid devices were produced by **Frank Vanni**, Visual Information Specialist, Department of Veterans Affairs, Rehabilitation Research and Development Service, Scientific and Technical Publications Section.

ON THE COVER

The cover illustrates several milestones in the development of hearing aids. It shows (counterclockwise) the early hearing trumpet (circa 1670); air conduction electric hearing aid (drawing from patent #767,-753, applied for by Charles W. Harper in 1902 and granted in 1904); the body style transistor aid (circa 1953); in-ear aid with integrated circuitry (1964); and cochlear implant (1995) featuring surgical implantation of electrodes.

Practical Hearing Aid Selection and Fitting

John W. Goldschmidt, M.D.

Director, Rehabilitation Research and Development Service
