Clinical Articles in the Journal of Rehabilitation Research and Development

The *Journal of Rehabilitation Research and Development* publishes the results of original scientific and engineering work in the rehabilitation field. Since rehabilitation R&D is an applied scientific and engineering field, it has natural linkages with clinical practice and with objective measurement of handicapping conditions. We are pleased to present in this issue articles on applications of rehabilitation technology to the important field of microstomia. These articles should stimulate further research and development as well as assist professionals in clinical practice.

Performance evaluation and assessment are basic tools of both applied researchers and clinicians. Note that each of the special clinical articles treat evaluation and assessment.
